MEMORANDUM

DATE: June 8, 1987

TO: John Osborn, FIT-RPO, USEPA, Region X

FOR: Joyce Crosson, RSCC, USEPA, Region X

THRU: David Buecker, FIT-OM, E&E, Seattle

FROM: James Herndon, Chemist, E&E, Seattle
Andrew Hafferty, Senior Chemist, E&E, Seattle

SUBJ: QA of Case 6973 (HSL Organics)
Pasco Landfill

REF: F10-8703-01

CC: Gerald Muth, DPO, USEPA, Region X
Marcia Knadle, ESD-PO, USEPA, Region X
Deborah Flood, HWD-SM, USEPA, Region X
Jeffrey Villnow, E&E, Seattle

The Quality Assurance review of 28 samples, Case 6973, collected from Pasco Landfill, has been completed. The 28 water samples were analyzed at low level for TCL organics by Gulf South Research Institute, of New Orleans, Louisiana the samples were numbered:

JC-303	JC-310	JC-317	JC-324
JC-304	JC-311	JC-318	JC-325
JC-305	JC-312	JC-319	JC-326
JC-306	JC-313	JC-320	JC-327
JC-307	JC-314	JC-321	JC-328
JC-308	JC-315	JC-322	JC-330
JC-309	JC-316	JC-323	JC-331

Sample JC-324 and JC-326 were analyzed for Acid/Base/Neutrals and Pesticides/PCBs only. Samples JC-325 and JC-331 were analyzed for volatiles only. Data Qualifications

The following comments refer to the laboratory performance in meeting the Quality Assurance - Quality Control Specifications outlined in Exhibit E of IFB WA 85-J-176.

USEPA SF

- 1) Timeliness - Acceptable
- 2) Instrument Tuning - Acceptable
 - a) The DFTPP spectra for 3/30/87 run on Instrument B (Finn 2) flagged 7 low intensity masses as saturated.
 - b) All BFB spectra (3/20/87 to 3/25/87) run on Instrument A (Finn 1) had masses flagged as saturated. The number of masses flagged varied between 14 and 78 per spectra.

The affect on data quality is not known, but concern is expressed with this occurrence.

- 3) Initial Calibration - Acceptable
- 4) Continuing Calibration

The ABN standard SS032987B (3/29/87) was out of control for the CCC Pentachlorophenol.

	%RSD	QC Limit
Pentachlorophenol	33.1%	25%

The ABN standard SS033087A (3/30/87) was out of control for the CCC Dinooctylphthalate.

	%RSD	QC Limit
Dinooctylphthalate	25.7%	25%

Volatile samples analyzed on 3/20/87 were run after an initial calibration. Sample quantitation is referenced against a 50 ppb standard in the raw data. No Form VII (Continuing Calibration) was supplied to reference the 50 ppb standard used against the initial calibration. It is assumed that the 50 ppb standard from the initial calibration was used to quantitate Blank 1, JC-303, JC-304 and JC-305.

The VOA standard VS032487B (3/24/87) was out of control for the CCCs Vinyl Chloride and 1,2-Dichloropropane.

	%RSD	QC Limit
Vinyl Chloride	28.1%	25%
1,2-Dichloropropane	26.2%	25%

The VOA standard VS032587A (3/25/87) was out of control for the CCC Vinyl Chloride.

	%RSD	QC Limit
Vinyl Chloride	25.4%	25%

5) Pesticide/PCB Standards

The laboratory resubmitted the Pesticide Evaluation Standards Summary covering the following samples:

JC-304	JC-318	JC-322
JC-305	JC-319	JC-324
JC-309	JC-320	JC-326
JC-317	JC-321	

- a) Linearity - Acceptable
- b) DDT Retention Time - Acceptable
- c) Retention Time Windows - Acceptable
- d) Analytical Sequence - Acceptable
- e) 4,4'-DDT/Endrin Degradation - Acceptable
- f) Dibutylchloroendate Retention Time Shift - Acceptable
- g) Standards - Acceptable
- 6) Instrument Detection Limits - Acceptable
- 7) Blanks

ABN - Acceptable

There was some confusion concerning the two blanks shown as extracted on the 3/20/87 extractions logs. Only one blank was analyzed for that day's extractions. It was difficult to correlate between the blank names on the extraction log and the rest of the data.

The laboratory resubmitted the semivolatile OADs forms for Blank 4 and Blank 5 to reflect corrected detection limits.

Volatiles

Blank VB032087B (Blank 1 - 3/20/87) contained Methylene Chloride (common solvent) at a level greater than 5 times the CRDL.

	sample	CRDL
Methylene Chloride	36 ppb	5 ppb

Pesticides/PCBs - Acceptable

8) Surrogate Recovery

ABN - Acceptable

Volatiles - Acceptable

Pesticides/PCB - Acceptable

9) Matrix Spike - Matrix Spike Duplicate

ABN

Spike recoveries on sample JC-316 were above advisory limits for Pyrene and 2,4-Dinitrotoluene.

	% Recovery	Limit
Pyrene (MS)	138%	26 - 127%
Pyrene (MSD)	148%	26 - 127%
2,4-Dinitrotoluene (MSD)	98%	24 - 96%

Spike recoveries on sample JC-322 were above advisory limits for Pyrene, 2,4-Dinitrotoluene and Phenol.

	% Recovery	Limit
Pyrene (MS)	140%	26 - 127%
Pyrene (MSD)	136%	26 - 127%
2,4-Dinitrotoluene (MS)	100%	24 - 96%
Phenol (MS)	91%	12 - 89%
Phenol.(MSD)	91%	12 - 89%

Volatiles - Acceptable

Pesticide/PCB

The Relative Percent Difference for spike recoveries on sample JC-316 were above advisory limits for Heptachlor.

	% RPD	Limit
Heptachlor	24%	20%

The Relative Percent Difference for spike recoveries on sample JC-322 were above advisory limits for all spiking compounds.

	% RPD	Limit
Lindane	57%	15%
Heptachlor	57%	20%
Aldrin	72%	22%
Dieldrin	57%	18%
Endrin	57%	21%
4,4'-DDT	62%	27%

10) Sample Analysis

All ABN results were flagged "J" (estimated) and detection limits flagged "UJ" (undetected, estimated quantitation limit) for samples JC-316 and JC-322 due to out of limits recoveries for spiking compounds Pyrene and 2,4-Dinitrotoluene.

Reported values for 2-Methylphenol, isophorone and naphthalene were flagged "M" (presumptive identification). Masses greater than 10% relative intensity existing the sample spectra are not accounted for in the confirmation spectra.

Acetone results for the blanks and samples listed below were flagged "J" (estimated value) due to a RPD greater than 25% in the continuing calibration standards.

Blank 3	JC-314	JC-318	JC-322
Blank 4	JC-315	JC-319	JC-325
JC-309	JC-316	JC-320	
JC-313	JC-317	JC-321	

Methylene Chloride results for samples JC-303, JC-304 and JC-305 Were flagged "UJ"(undetected, estimated quantitation limit) where sample concentrations were less than 10 times the amount found in the blank (36ppb X 10 = 360 ppb).

The Acetone result sample JC-319 was flagged "J" (estimated). The value reported was below CRDL.

The Methylene Chloride result in sample JC-319 was flagged "J" (estimated) The raw quantitation value (the value before accounting for dilution) was 50% higher than the highest standard, and therefore outside of the established linear range. A second dilution run was not made.

Methylene Chloride and Benzene results for sample JC-328 were flagged "J" (estimated). The raw quantitation values (the values before accounting for dilution) were below the CRDL for those compounds.

The "B" flag was removed from the Tentatively Identified Compound (TIC) report (Form 1, Part B) for the volatiles samples listed below. The compound listed as "Unknown" at or near scan 290 was not quantitated on the blank sample TIC report.

JC-310	JC-313	JC-315	JC-324
JC-311	JC-314	JC-317	JC-326

The laboratory resubmitted volatile OADs forms for samples JC-319 and JC-328 to reflect higher detection limits for diluted samples.

Pesticide/PCB results for sample JC-322 were flagged "J" (estimated) and detection limits flagged "UJ" (undetected, estimated quantitation limit) due to out of limit RPDs for all spiking compounds.

Data Use

The usefulness of the data is based on the criteria in the "Laboratory Data Validation Functional Guidelines for Evaluating Organics (R-582-4-5-01) and Pesticides/PCB (R-582-55-01)".

Upon consideration of the data qualifications noted above, the ABN, Volatile and Pesticide/PCB data are ACCEPTABLE for use except where flagged with data qualifiers that modify the usefulness of the individual values.

Data Qualifiers

- U - The material was analyzed for, but was not detected. The associated numerical value is an estimated sample quantitation limit.
- J - The associated numerical value is an estimated quantity because quality control criteria were not met or concentrations reported were less than the CRQL.
- R - Quality Control indicates that data are unusable (compound may or may not be present). Resampling and reanalysis are necessary for verification.
- Q - No analytical result.
- N - Presumptive evidence of presence of material (tentative identification).
- B - The compound was found in the laboratory blank as well as the sample.
- M - Mass spectral criteria for positive identification were not met. However, in the opinion of the laboratory, the identification is correct based on the analyst's professional judgement.
- F - Concentration of this compound exceeds either the primary or secondary drinking water standard listed in the Safe Drinking Water Act of 1974.

GULF SOUTH RESEARCH INSTITUTE

May 15, 1987

Ms. Linda Boynton, Group Leader
U.S. Environmental Protection Agency
CLP Sample Management Office
P.O. Box 818
Alexandria, VA 22313

Subject: EPA Contract No. 68-01-7141
Case 6973
GSRI Project No. 6200-3020

Dear Ms. Boynton:

Please find enclosed resubmissions for the above subject case which were requested by Mr. Danny Hafferty of Ecology and Environment. They are as follows:

Form VIII - missing page 2
VOA Blank #6 - missing page (quantitation report)
Form VI - missing VOA Initial Calibration
Form I, page 1 - corrected detection limits for samples JC-319 and JC-328
Form I, page 2 - corrected detection limits for SV Blank 4 and 5

Mr. Hafferty also noted a missing continuing calibration standard run on 3/20/87. The only standard which was run on that date was the initial standard.

If you have any questions please do not hesitate to call.

Sincerely,

Cindy Palazzo
Report Center Manager

Data Reporting Qualifiers

For reporting results to EPA, the following results qualifiers are used.
 Additional flags or footnotes explaining results are encouraged. However, the definition of each flag must be explicit.

Value If the result is a value greater than or equal to the detection limit, report the value.

C This flag applies to pesticide parameters where the identification has been confirmed by GC/MS. Single component pesticides $\geq 10\text{ }\mu\text{l}$ in the final extract should be confirmed by GC/MS.

B This flag is used when the analyte is found in the blank as well as a sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action.

Other Other specific flags and footnotes may be required to properly define the results. If used, they must be fully described and such description attached to the data summary report.

U Indicates compound was analyzed for but not detected. Report the minimum detection limit for the sample with the U (e.g., 10U) based on necessary concentration/dilution action. (This is not necessarily the instrument detection limit.) The footnote should read: U. Compound was analyzed for but not detected. The number is the minimum attainable detection limit for the sample.

J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed or when the mass spectral data indicated the presence of a compound that meets the identification
